

Education

National Institute of Technology, Srinagar	2020 - 2024
B.Tech, Information Technology	CGPA: 7.83

Technical Skills

Languages: TypeScript, JavaScript, C++, C#, PowerShell
Backend & Web: Node.js, Express.js, NestJS, REST APIs, WebSockets, JWT/OAuth 2.0
Cloud & DevOps: Azure (Network Watcher, Load Balancer, VMSS, Managed Identity, Runbooks, Policy, Resource Graph, Service Fabric, HDInsight, AI Foundry), Ev2, Geneva, Docker, Git
Databases: MongoDB, PostgreSQL, MySQL, Cosmos DB
Tools & Practices: Postman, Jira, Copilot CLI, CI/CD, Agile

Experience

Technical Lead - Backend Development | HCLTech (Microsoft Dev Team)

Sep 2024 – Present

- Architected an end-to-end backend to track Microsoft release deployments across all global regions with integrated per-release storage, exposed as a custom MCP server enabling autonomous agents to monitor rollouts and surface per-region SLA delays and exception logs on completion, delivering real time, zero touch deployment visibility to release and customer teams (Node.js, Azure SQL, Managed Identity, Azure AI Foundry, Azure SRE Agent).
- Mitigated high severity vulnerability events across 800+ customer Azure compute instances by automating guest patching via REST APIs and Azure Runbooks with Managed Identity auth, leaving zero user bearer token trace, hardening customer workloads with no manual intervention.
- Engineered backend services for an SFI resolution platform, with REST APIs integrating a custom Azure AI Foundry model to auto-summarize remediation tasks; automated SFI report-mail generation, cutting vendor reporting time by 90%.
- Owned 13 SFI security workstreams with 100% on-time resolution, sustaining a ~750 secure score and 4x perfect S360 scores.
- Built 8 Ev2 scripts and 8 deployment automation pipelines enabling zero-touch runner infra creation, cutting tagged Public IP usage by 50%.
- Owned dataplane validation infra (MIVnet, Overlake VNet) across 3 Azure clouds and 60+ regions; expanded Managed Identity to 60+ regions for passwordless auth.
- Built 11+ Azure Runbook automations cutting manual-touch operations by 70% — 150+ userConfig failures and 300+ untagged Public IPs remediated zero-touch.
- Executed automated script actions across 50+ HDInsight clusters, 2 clouds, and 17+ prod regions via Ev2 automation to meet a customer deadline 50% faster.

Backend Developer Intern | Mapsense

Feb 2024 – Sep 2024

- Built end to end of the backend for the Location Intelligence platform end-to-end, sustaining 99% production uptime.
- Implemented OAuth 2.0 Google Sign-In, accelerating registration by 30%; built profile APIs for invites, uploads, and geo-data workflows.
- Built location services (path retrieval, road snapping, session tracking), improving data precision by 40%; helped secure the first enterprise client (The Nature Conservancy).

Personal Projects

Broadcasting Server: (Link) Description: Real-time group chat server with share-able room invite links and live presence. Features: WebSocket messaging, UUID invite links, live presence, message history, JWT auth. Tech: Node.js, Express.js, WebSocket (ws), Mon-goDB, Mongoose, JWT.	Contact Manager Backend: (Link) Description: Secure REST API for personal contacts; each user accesses only their own data. Features: JWT-protected routes, registration/login, per-user contact CRUD, MVC architecture. Tech: Node.js, Express.js, MongoDB, JWT, REST API.
