

Education

National Institute of Technology, Srinagar

B.Tech, Information Technology

2020 - 2024

CGPA: 7.83

Technical Skills

Languages: TypeScript, JavaScript, C++, C#, PowerShell

Backend & Web: Node.js, Express.js, NestJS, REST APIs, WebSockets, JWT/OAuth 2.0

Cloud & DevOps: Azure (Network Watcher, Load Balancer, VMSS, Managed Identity, Runbooks, Policy, Resource Graph, Service Fabric, HDInsight, AI Foundry), Ev2, Geneva, Docker, Git

Databases: MongoDB, PostgreSQL, MySQL, Cosmos DB

Tools & Practices: Postman, Jira, Copilot CLI, CI/CD, Agile

Experience

Backend Development | HCLTech (Microsoft Client)

Sep 2024 – Present

- Engineered backend services for an SFI resolution platform, with REST APIs integrating a custom Azure AI Foundry model to auto-summarize remediation tasks; automated SFI report-mail generation, cutting vendor reporting time by 90%.
- Built Geneva Kusto-backed APIs powering real-time deployment-health dashboards, cutting manual release verification by 70%; backend services for release and Ev2 rollout tracking cut report time 90% and tracking time 50%.
- Owned 13 SFI security workstreams with 100% on-time resolution, sustaining a ~750 secure score and 4x perfect S360 scores.
- Built 11+ Azure Runbook automations cutting manual touch operations by 70% — 150+ OS vulnerabilities, 150+ userConfig failures, 300+ untagged Public IPs remediated zero-touch.
- Built 8 Ev2 scripts and 8 deployment automation pipeline enabling zero-touch runner infra creation, cutting tagged Public IP usage by 50%.
- Owned dataplane validation infra (MIVnet, Overlake VNet) across 3 Azure clouds, 60+ regions; expanded Managed Identity to 60+ regions for passwordless auth.
- Tracked 100% of service and HDInsight releases at 99% success, with per-region health insights (SLA delays, exceptions, Service Fabric health) driving failure mitigation.
- Executed automated script actions across 50+ HDInsight clusters, 2 clouds, and 17+ prod regions via Ev2 automation to meet customer deadline 50% faster.
- Enabled Azure Load Balancer health probing on VMSS instances; refactored Traffic Analytics auth to tenant-based scoped roles, tightening access governance.
- Cut build package size by 10% via RCA on build localization failures, eliminating recurring pipeline build failures.

Backend Developer Intern | Mapsense

Feb 2024 – Sep 2024

- Built 80% of the backend for the Location Intelligence platform end-to-end, sustaining 99% production uptime.
- Implemented OAuth 2.0 Google Sign-In, accelerating registration by 30%; built profile APIs for invites, uploads, and geo-data workflows.
- Built location services (path retrieval, road snapping, session tracking), improving data precision by 40%; helped secure the first enterprise client (The Nature Conservancy).

Personal Projects

Broadcasting Server: (Link)

- Description:** Real-time group chat server with shareable room invite links and live presence.
- Features:** WebSocket messaging, UUID invite links, live presence, message history, JWT auth.
- Tech:** Node.js, Express.js, WebSocket (ws), MongoDB, Mongoose, JWT.

Contact Manager Backend: (Link)

- Description:** Secure REST API for personal contacts; each user accesses only their own data.
- Features:** JWT-protected routes, registration/login, per-user contact CRUD, MVC architecture.
- Tech:** Node.js, Express.js, MongoDB, JWT, REST API.
